

Utility Relocations

This package contains perhaps the most complicated scope of work as there are numerous utilities in the existing street right-of-ways that must be relocated in order for the excavation efforts of Package 1 to proceed. These utility relocations include water, storm sewer, waste water, electricity, chilled water and telecommunications; e.g. AT&T, Spectrum, Level 3, University of Texas, etc. In addition, the coordination with the City of Austin on changes to traffic patterns, the vacation of Congress Avenue, and numerous permits, encroachments agreements, and the like, will require close coordination, monitoring, and careful schedule adjustments over the next three years.
